About the Grand Hotel Palazzo della Fonte

Less than an hour away from Rome the Palazzo della Fonte raises in the quietness of a private park, moments away from Fiuggi's medieval historic center.

The thermal town of Fiuggi owes its international prominence to the purifying and rebalancing properties of its water springs but also to the rich cultural heritage and breathtaking natural landscapes.

The Palazzo propose a balanced lifestyle under the sign of wellness and healthy food following the leisurely pace of nature and pampered by intimate and warm atmosphere of the hotel.

1913-2013. The Palazzo is celebrating a hundred years! At Fiuggi everything is born from water, the source that since the Middle Ages was known for its ability to "break stones" and that cured the illness of Pope Boniface VIII and Michelangelo. The birth and development of one of the most famous Italian "villes d'eaux" is closely linked to the history of the Grand Hotel Palazzo della Fonte.

Majestic, elegant, unique in its liberty style, the hotel was built to be the most elegant and modern in Europe. After opening in 1913, it became the most fashionable meeting place for the high society as well as a favorite destination for the European aristocracy. In 1914, the King of Italy Vittorio Emanuele III along with the royal family chose the Palazzo as a summer residence.

After the First World War and during the 1930s the hotel reached its maximum splendor. In 1936, it was equipped with the first private swimming pool of Europe and in its sumptuous sitting rooms tables of roulette, baccarat, and chemin de fer were set up. During this time, the Palazzo consolidated its reputation of true royal residence, frequented by the high society of the period. Giovanni Giolitti, Pablo Picasso, Luigi Pirandello, Gabriele D'Annunzio, Guglielmo Marconi, Eleonora Duse, Caruso, Caroll Baker, and Titta Ruffo were among the most affectionate guests. During the Second World War, the Palazzo served as the hospital of the Red Cross. Shortly after, the hotel hosted the headquarters of the Allied Powers for the entire period of their occupation.

Returned to the prestigious clients, between 1946 and 1960, the Palazzo became the summer residence of the country's ruling class, as well as a haven of relaxation for many health-conscious personalities of the entertainment world, including Vittorio De Sica, Eduardo De Filippo, Totò, Roberto Rossellini, Ingrid Bergman, and many others. In the same years, the Palazzo gave birth to legendary career of the world-renowned chef Luigi Carnacina. In 1988 the international hotel group Forte returned the palace to its ancient splendor, with a massive renovation that lasted more than two years.

The original Art Nouveau frescoes of the façade, the harmonious elegance of the rooms, and the charming setting of the pool were restored and today the Palazzo lives its best season.

In 2008, the Palazzo was recognized by the Italian Ministry of Heritage and Culture as a "palace worthy of protection and conservation as an important example of Italian hotels and spa tourism business as well as the architecture of the early twentieth century where the Art Nouveau style, in all its environments, gives the building a unique architectural value."

LITETOUCH™

Er:YAG Laser-in-Handpiece

CHANGING THE WORLD OF DENTISTRY

About Light Instruments

Light Instruments Ltd. is an Israel-based company that has made its name as an innovator in the dental laser field, continually raising the bar with its advanced high-end technologies. In 2007, Light Instruments introduced the revolutionary

Laser-in-Handpiece™ technology as part of its flagship LiteTouch™ dental laser, the world's most versatile non-fiber Er: YAG laser device for soft and hard tissue dental treatments.

Discover LiteTouch™: LiteTouch™ is the world's smallest Erbium YAG dental laser for both soft and hard tissue dental treatments. Its unique Laser-in-Handpiece™ technology houses the entire laser mechanism within an impressively small chamber (just 12cm long, with a 2.5cm diameter). This innovative solution mimics the feel of a turbine drill, yet incorporates the laser's unique benefits: micro surgery, faster healing, minimal invasive treatments, and higher patient acceptance.

Next-Generation Laser Dentistry: Light Instruments recently launched its newest LiteTouch™ model, continuing to realize the company's vision of developing the latest cutting-edge technologies for lasers in dentistry. In addition to the cutting-edge Er:YAG dental laser with Laser-in-Handpiece technology, the new model features an intuitive touchscreen for complete control, with various adjustable preset options and comprehensive status updates. This powerful function, coupled with the LiteTouch™ applicator's unmatched maneuverability, enables dental practitioners to perform procedures quickly and easily, with no reduction in quality. Thanks to this unique utility, new LiteTouch™ users will enjoy a very short learning curve.

Award-Winning Design: Intuitive and appealing, the design of the new LiteTouch™ model impressed the Red Dot jury, winning the highly-coveted Red Dot Award for 2016. This new model is significantly smaller, with a compact, lightweight, streamlined design that has a uniquely small footprint, taking up minimal space. It is also easily portable for maximum convenience. The new LiteTouch™ is available in a variety of attractive colors with modern lasing illumination, and contributes to a welcoming clinic atmosphere.

Global Success: It may have only a small footprint in the clinic, yet LiteTouch™ stands out around the globe, becoming an indispensable device in leading clinics on almost every continent. Light Instruments is committed to support the requirements of its customers worldwide, and this new model is adapted to fulfill those precise needs. Every Light Instruments customer is assured the very best support thanks to the company's customer service division, which establishes a new benchmark for excellence in the dental laser industry.
